

2022 100% Free BL0-200 Daily Practice Exam With 62 Questions [Q36-Q54]

2022 100% Free BL0-200 Daily Practice Exam With 62 Questions
BL0-200 exam torrent Nokia study guide

NEW QUESTION 36

What is a characteristic of analog beamforming?

- * Primarily use for adding capacity
- * Support MU-MIMO
- * Radiating elements each have separate TRX
- * Only transmits one beam at a time

NEW QUESTION 37

5G transport network is a combination of three transport components. What are those 3 units?

- * Access Midhaul – Metropolitan/Core – Access Fronthaul
- * Access Backhaul – Metropolitan/Core – Backbone Core
- * Access Fronthaul – Metropolitan/Core – Access Midhaul
- * Access Midhaul – Metropolitan/Core – Mobile Access

NEW QUESTION 38

Which protocol can be used between the radio and DU function on a gNB?

- * SDN
- * eCPRI
- * eMBB
- * TDM

NEW QUESTION 39

What differentiates 5G radio planning tools from 2G and 3G radio planning tools?

- * Cloud feature leveraging
- * NFV and SDN introduction
- * New antenna pattern and beamset
- * Closed loop services

NEW QUESTION 40

Which of the following is a valid access method to 5G technology?

- * WLAN access
- * Cellular access
- * Fixed access
- * All of the above

NEW QUESTION 41

What needs to be done to the deployed fiber assets, in case a network is upgraded from a 10G to a 25G fiber access network?

- * Single mode fibers need to be swapped by multi-mode fibers.
- * Dedicated developed fibers for 25G speeds need to be deployed.
- * This is an impossible upgrade.
- * Don't worry, your fiber assets are future proof, no swap is needed.

NEW QUESTION 42

Which of the following is a functionality of the User Plane Function (UPF)?

- * Connects to external networks via N8 reference point
- * Sends traffic usage reporting to the SMF for charging
- * Enforces policies received from NSSAI and applies them as slices.
- * Acts as the interconnection point with Non-3GPP Access networks

NEW QUESTION 43

Which of the following steps is NOT used in the Network Slice Orchestration lifecycle management?

- * Create
- * Initiate request
- * Manage
- * Terminate

NEW QUESTION 44

Which of the following is NOT a valid method to route the data to the destination during roaming?

- * Home-routed Roaming Architecture
- * ITE-bypass Roaming Architecture
- * Local Break-out Roaming Architecture
- * None of the above

NEW QUESTION 45

Which of the following is NOT defined by 3GPP as a category for SON?

- * Self-scaling
- * Self-configuring
- * Self-optimizing
- * Self-healing

NEW QUESTION 46

Concentrator location is done during which phase?

- * RF design
- * Detailed design
- * Digital twin creation
- * X-Haul design

NEW QUESTION 47

Which of the following Is NOT an advantage of offloading mobile data to a fixed uplink through a wifi network?

- * Free-up RAN capacity
- * Lowering costs of data usage
- * The end-user is responsible for the Wifi network
- * Provides better coverage inside the premises than 5G

NEW QUESTION 48

Ethernet Virtual Private Networks enables :

- * Network virtualization in data centers
- * Enables dynamic traffic engineering services
- * Segment routing-traffic engineering
- * Exposes the full topology to the SON Controller

NEW QUESTION 49

Is the FTTH technology suitable to serve as a fronthaul of the 5G cells?

- * No, because an FTTH network was developed and deployed to connect homes.
- * No, because an FTTH network has a limited capacity of 2.5Gbps down and 1.2Gbps up.
- * No, because an FTTH network can't deal with the 5G latency, capacity and performance demands.
- * Yes, re-using the FTTH network reduces costs, speeds-up deployment and FTTH is still being improved to reduce latency and increase performance.

NEW QUESTION 50

When is a non-standalone deployment needed?

- * When you need 4G RAN to provide all 5G services
- * When you need 5G RAN to provide all 5G services
- * When you need to have interworking between 4G and 5G core
- * When deploying 5G RAN but want to use 4G core

NEW QUESTION 51

In an Option 2 deployment, when additional capacity is required, what is the best solution?

- * Carrier aggregation for 4G cells

- * Dynamic spectrum sharing
- * Dual connectivity
- * Carrier aggregation for 5G cells

NEW QUESTION 52

Why Is beamforming coverage better for 5G compared to 4G?

- * Lower frequency deployments
- * Beam sweeping SSB
- * Higher frequency deployments
- * Better uplink coverage

NEW QUESTION 53

In an SDN network the traffic engineering is:

- * typically conducted by operators on a yearly or quarterly basis
- * conducted near real-time, on a granular second or minute basis
- * conducted offline
- * conducted by the operators upon the appearance of a problem

NEW QUESTION 54

Which 3GPP Release 15 deployment option features an only LTE Network {RAN and Core)?

- * Option 1
- * Option 2
- * Option 3
- * Option 4
