

## Updated May-2022 Exam Engine for ACE Exam Free Demo & 365 Day Updates [Q19-Q33]

Updated May-2022 Exam Engine for ACE Exam Free Demo & 365 Day Updates  
Exam Passing Guarantee ACE Exam with Accurate Questions!

### NEW QUESTION 19

After configuring Captive Portal in Layer 3 mode, users in the Trust Zone are not receiving the Captive Portal authentication page when they launch their web browsers. How can this be corrected?

- \* Ensure that all users in the Trust Zone are using NTLM-capable browsers
- \* Enable `Response Pages`; in the Interface Management Profile that is applied to the L3 Interface in the Trust Zone.
- \* Confirm that Captive Portal Timeout value is not set below 2 seconds
- \* Enable `Redirect`; as the Mode type in the Captive Portal Settings

### NEW QUESTION 20

Which Aviatrix Controller feature automates the configuration of AWS Transit Gateway, VPC Route Tables, Direct Connect learned routes and Security Domain?

- \* Aviatrix Site to Cloud (S2C)

- \* Aviatrix High Performance Encryption (HPE)
- \* Aviatrix Firewall Networks (FireNet)
- \* Aviatrix AWS TGW Orchestrator

#### NEW QUESTION 21

Which of the following types of protection are available in DoS policy?

- \* Session Limit, SYN Flood, UDP Flood
- \* Session Limit, Port Scanning, Host Swapping, UDP Flood
- \* Session Limit, SYN Flood, Host Swapping, UDP Flood
- \* Session Limit, SYN Flood, Port Scanning, Host Swapping

#### NEW QUESTION 22

What is/are the protocol(s) supported by Aviatrix Site2Cloud (S2C) Gateway?

- \* GRE
- \* UDP only
- \* Both TCP and UDP
- \* TCP only

#### NEW QUESTION 23

When adding an application in a Policy-based Forwarding rule, only a subset of the entire App-ID database is represented. Why would this be?

- \* Policy-based forwarding can only identify certain applications at this stage of the packet flow, as the majority of applications are only identified once the session is created.
- \* Policy-based forwarding rules require that a companion Security policy rule, allowing the needed Application traffic, must first be created.
- \* The license for the Application ID database is no longer valid.
- \* A custom application must first be defined before it can be added to a Policy-based forwarding rule.

#### NEW QUESTION 24

Will an exported configuration contain Management Interface settings?

- \* Yes
- \* No

#### NEW QUESTION 25

If there is an HA configuration mismatch between firewalls during peer negotiation, which state will the passive firewall enter?

- \* INITIAL
- \* NON\*FUNCTIONAL
- \* PASSIVE
- \* ACTIVE

#### NEW QUESTION 26

Which of the following is NOT a valid option for builtin CLI Admin roles?

- \* deviceadmin
- \* superuser

- \* devicereader
- \* read/write

### NEW QUESTION 27

The "Disable Server Return Inspection" option on a security profile:

- \* Can only be configured in Tap Mode
- \* Should only be enabled on security policies allowing traffic to a trusted server.
- \* Does not perform higher-level inspection of traffic from the side that originated the TCP SYN packet
- \* Only performs inspection of traffic from the side that originated the TCP SYN-ACK packet

### NEW QUESTION 28

Which of the following can provide information to a Palo Alto Networks firewall for the purposes of UserID? (Select all correct answers.)

- \* Domain Controller
- \* SSL Certificates
- \* RIPv2
- \* Network Access Control (NAC) device

### NEW QUESTION 29

Aviatrix Controller provides a VPC Creator tool that allows customers to create VPC, VNETs across multiple clouds like AWS, GCP, Azure and OCI from single pane of glass.

- \* True
- \* False

### NEW QUESTION 30

Which statement below is True?

- \* PANOS uses BrightCloud as its default URL Filtering database, but also supports PANDB.
- \* PANOS uses PANDB for URL Filtering, replacing BrightCloud.
- \* PANOS uses BrightCloud for URL Filtering, replacing PANDB.
- \* PANOS uses PANDB as the default URL Filtering database, but also supports BrightCloud.

### NEW QUESTION 31

WildFire Analysis Reports are available for the following Operating Systems (select all that apply)

- \* Windows XP
- \* Windows 7
- \* Windows 8
- \* Mac OS-X

### NEW QUESTION 32

When using Config Audit, the color yellow indicates which of the following?

- \* A setting has been changed between the two config files
- \* A setting has been deleted from a config file.
- \* A setting has been added to a config file

\* An invalid value has been used in a config file.

**NEW QUESTION 33**

Aviatrix platform provides rich capabilities around networking, security and operations in public cloud networks. In addition to Aviatrix Transit, it also helps customers overcome limitations of native public cloud constructs. Below, match the Aviatrix platform capability for AWS Transit Gateway (TGW) with the appropriate problem description.

AWS TGW Route Approval	Customers are responsible for managing route tables at TGW and all the VPCs which is a huge administrative and technical overhead for customers.
AWS TGW View	Inability to have consolidated list of VPCs across AWS TGWs, accounts, regions with CIDRs, IDs etc.
AWS TGW Route Audit	If someone makes a mistake and inserts bad routes, manually or via automation such as terraform, there is no ability to catch this common issue.
AWS TGW List	With multiple Transit Gateways and VPCs attached to them, there is a need for visualization to map how VPCs and TGWs are connected.
AWS TGW and VPC route table orchestration	When a route is advertised over BGP, this route is automatically propagated to all VPCs. There needs to be an ability for the network engineers to approve the route before it is propagated.

AWS TGW Route Approval	When a route is advertised over BGP, this route is automatically propagated to all VPCs. There needs to be an ability for the network engineers to approve the route before it is propagated.	Customers are responsible for managing route tables at TGW and all the VPCs which is a huge administrative and technical overhead for customers.
AWS TGW View	With multiple Transit Gateways and VPCs attached to them, there is a need for visualization to map how VPCs and TGWs are connected.	Inability to have consolidated list of VPCs across AWS TGWs, accounts, regions with CIDRs, IDs etc.
