

[Jun-2022 Updated Nutanix Certified Professional (NCP) NCP-DS Exam Questions BUNDLE PACK [Q40-Q58]

[Jun-2022 Updated Nutanix Certified Professional (NCP) NCP-DS Exam Questions BUNDLE PACK Master The Nutanix Content NCP-DS EXAM DUMPS WITH GUARANTEED SUCCESS!]

Nutanix NCP-DS Exam Syllabus Topics:

TopicDetailsTopic 1- Given a scenario, configure shares, buckets and- or Volume Groups- Identify the steps to deploy Nutanix ObjectsTopic 2- Describe how to monitor performance and usage- Troubleshoot Nutanix Data ServicesTopic 3- Given a scenario, utilize Prism Pro for capacity planning- Utilize file analytics to asses usage patternsTopic 4- Perfaomance upgrades - maintenance for Files- Objects implementations- Identify the steps to deploy Nutanix FilesTopic 5- Given a scenario, determine product and sizing parameters- Deploy and upgrade Nutanix data servicesTopic 6- Troubleshoot issues related to Nutanix volumes- Analyze and monitor Nutanix data servicesTopic 7- Troubleshoot issue related to Nutanix objects- Troubleshoot a failed upgrade for Files- Objects

NO.40 An administrator performed an upgrade to Prism Central. However, after reviewing the configuration, Objects is enabled but was not upgraded to the latest version. The Objects configuration is showing enabled for the environment and Prism Element has beenupdated on the cluster How should the administrator resolve this issue?

- * Reapply the Prism Central upgrade
- * Restart Objects service and rerun the upgrade.
- * Upgrade NCC and rerun the upgrade
- * Perform LCM Inventory and apply updates

NO.41 An administrator has been asked to create a new user account for an auditor during an audit event. The auditor will write data to a Files share. For confidentiality reasons the auditor's tasks should be not analyzed by the system. How should the administrator configure File Analytics to accomplish this task?

- * Restrict Files access for the auditor
- * Create a dedicated share for the auditor in Files
- * Define a blacklisting rule in File Analytics
- * Grant anonymous access to the share used by the auditor.

Explanation

NO.42 The Compliance department would like the administrator to have the ability to revert documents to previous versions. How should the administrator facilitate this request?

- * Configure protection snapshots on the File Server
- * Enable Self-Service Restore on the Share/Export
- * Configure Protection snapshots on the Share/Export
- * Enable Self-Service Restore on the File Server

NO.43 An administrator has been informed of a new project, which requires expanding the capacity of the project team's Volume Group without disrupting availability or affecting performance Which steps should the administrator take to achieve this?

- * Clone the existing Volume Group to a larger instance and switch to the new Volume Group
- * Add new dishes to the Volume Group and wait for the Volume Group to auto-resize
- * Create a new larger Volume Group and migrate the files
- * Add new data to the Volume Group and expand the Volume Group online

NO.44 An administrator is experiencing the following objects failure error message:

IAM service is not healthy

The object store domain entries appear grayed out in the user interface, as shown in the exhibit.

Which commands should the administrator execute to identify the failure source?

- * A `mspcli cluster_list`
- B `mspcli status -u <UUID-UUID-UUID-UUID>`
- * A `mspctl cluster_objects`
- B `mspctl status -u <UUID-UUID-UUID-UUID>`
- * A `mspcli cluster_objects`
- B `mspcli status -u <UUID-UUID-UUID-UUID>`
- * A `mspctl cluster_list`
- B `mspctl status -u <UUID-UUID-UUID-UUID>`

NO.45 A company is implementing Files and has these requirements

- * Six departments
- * Each department needs to access its own shared namespace
- * 18,000 users

Given the nature of the workload the administrator has decided to scale up by adding the maximum amount of CPU and RAM What should the administrator implement to satisfy the stated requirements?

- * Six standard shares with 3.000 concurrent sessions
- * The administrator should create a distributed share
- * The administrator should create a standard share
- * Six distributed shares with 18.000 concurrent sessions

NO.46 An administrator needs to upgrade Files in a dark site environment without LCM, Which set of actions should the administrator perform?

- * Setup a web server and point prism to it to fetch the bits and then click Upgrade.
- * Run any NCC checks related to Files and trigger an upgrade from Prism.
- * Download the metadata and binary bits from the portal, upload then to prism and click Upgrade.
- * Connect the cluster to the internet to perform the upgrade through prism.

Explanation

https://support-portal.nutanix.com/page/documents/details?targetId=Acropolis-UpgradeGuidev5_18:Acropolis-U

NO.47 Users from the brazil HQ office are complaining that they are not able to save data stored on the company's Files solution. The save process often fails and they are unable to work.

While troubleshooting, the storage administrator observes that the share auth process times out. Files is connected to a domain controller located in the UK.

What should the administrator do to solve the problem?

- * Check the Active Directory Domain Trust settings
- * Leave the UK Domain and join the Brazil domain
- * Use afs commands on an FSVN to set the local DC as preferred
- * Ask the affected users to install the latest security patches and reboot.

NO.48 An administrator needs to configure a Files share with these requirements:

Supports 100 virtual desktop users * Share would host user data

Share is limited to 1 TB, evenly distributed across users Optimized for best I/O performance within the current environment Which two configuration actions should the administrator take to meet these requirements?

(Choose two.)

- * Create a distributed share
- * Configure a standard share
- * Enable ABE on the share
- * Add a quota policy to the share

NO.49 An administrator would like to convert an existing Volume Group with an attached external Windows client to use Volumes. The administrator has taken these actions:

. Disconnect any existing SCSI targets

Remove targets from the Favorite Targets tab

* Remove targets from the Discovery tab

Which action must the administrator take next to complete this task?

- * Connect with MPIO to the iSCSI Data Services IP
- * Connect without MPIO to the Cluster Virtual IP
- * Connect without MPIO to the iSCSI Data Services IP
- * Connect with MPIO to the Cluster Virtual IP

NO.50 An administrator is implementing a storage solution with these requirements:

- * Is easily searchable
 - * Natively supports disaster recovery
 - * Access to each item needs to be fast
 - * Can scale to petabytes of data
 - * Users are granted access after authentication
 - * User data is isolated, but could be shared
- How should the administrator satisfy these requirements?
- * Configure Calm with an application per user
 - * Deploy Objects with AD integration
 - * Implement Volumes with CHAP
 - * Use Files distributed share with ABE

NO.51 An administrator configured WORM on an existing Objects bucket at 4 p.m. on Monday. During the configuration, the administrator did not select Enable Version. At 8 am, the next morning a ticket was submitted to update the bucket to include versioning. What are the correct steps to make the requested change?

- * Create a new bucket with Enable Version selected and migrate all data since versioning cannot be changed after 12 hours once WORM is enabled
- * Disable WORM and reconfigure with Enable Version and Enable WORM checked as it has been less than 24 hours since WORM was enabled
- * Update the WORM settings to Enable Version as that setting can be turned on at any point after WO is enabled
- * Create a new bucket with Enable Version selected and migrate all data since versioning cannot be changed immediately after WORM is enabled.

NO.52 An administrator is using Objects for the company's DevOps department.

The administrator must ensure that the data meets regulatory compliance requirements for many critical sectors and still gives users the option to recover from accidental overwrite or unwanted modification of an object.

Which two components should the administrator enable to complete this task? (Choose two.)

- * Windows Previous Versions (WPS)
- * Self Service Restore (SSR)
- * Object versioning

* Write-Once-Read-Many (WORM)

NO.53 An administrator's organization is migrating to Files. The administrator has been asked to provision the appropriate access for the Nutanix administrators and Help Desk.

Which two actions will ensure the required access? (Choose two.)

- * Grant the Help Desk File Server Admin access.
- * Grant the Nutanix administrator File Server Admin access
- * Grant the Nutanix administrator Backup Admin access.
- * Grant the Help Desk Backup Admin access.

NO.54 The CIO has informed the administrator that the CFO is unable to upload a presentation for the board of directors to their home directory. After reviewing the user's home directory, the administrator was able to determine that other presentations were previously uploaded without any issues. What Files configuration is causing this issue?

- * The Quota Policy has been configured with a Hard Limit and the presentation file size is larger than the available space
- * The presentation file format is on the Blocked File Type list on the file server
- * The Quota Policy has been configured with a Soft Limit and the presentation file size is larger than the available space
- * The presentation file format is on the Blocked File Types list on the share

NO.55 An administrator is using Volumes for its mission-critical environments to support its highly transactional Oracle database. Users have reported that recent queries to the database are very slow and the response times have increased as the database has grown. The administrator noticed that the database server is built using a single large vDisk for the database and logs. How should the administrator resolve this issue?

- * Increase vDisk size for the mission-critical workload and enable flash-mode.
- * Use between four and eight vDisks for the mission-critical workload
- * Increase vDisk size for the mission-critical workload and enable VGLB
- * Increase the iSCSI MaxTransferLength of the clients.

NO.56 An administrator followed best practice using Prism Central to perform an upgrade to objects.

However, the following warning was received:

A Nutanix Objects Upgrade failed to complete properly.

The administrator needs to review the logs specific to the upgrade process.

Which 2 log files should the administrator review to determine the failure? (Choose Two)

- * /home/Nutanix/aoss/logs/aoss_service_manager.out
- * /home/Nutanix/msp/logs/msp_controller.out
- * /home/Nutanix/data/logs/aoss_service_manager.out
- * /home/Nutanix/data/logs/msp_controller.out

NO.57 An administrator has received the following alert:

File Server In Heterogeneous State

What is the reason for this alert?

- * The FSVMs do not match in their CPU or memory configuration.
- * The FSVMs are not distributed properly on the hosts in the cluster
- * Performance of the File Server is optimal and the alert can be ignored

* The hosts where the FSVMs run do not match in their CPU or memory configuration.

NO.58 The marketing department has complained that they are unable to upload or modify MOV files on all marketing file shares in Files. During troubleshooting, the administrator has found that all users are unable to upload MOV files to any share. What is preventing files from being uploaded?

- * Files administrator has added the MOV file extension to the Blocked File Types on the file server.
- * Files administrator has added the MOV file extension to the Blocked File Types on the marketing department share
- * Authentication on the share has been set None
- * Authentication on the share has been set to Kerberos (AD)
